➢ Dynamic design analysis:

- ECU 1 :
  - state machine diagram:

  - sequence diagram:

  - CPU load : Assuming (Task 1 period = 2ms , Task2 period = 2ms , Task3 period = 2ms)

    U = (2 + 2 +2) / (hyper-period = 20) = 6/20 =30%

- ECU 2 :
  - state machine diagram:

  - sequence diagram:

  - CPU load : Assuming (each task has an execution time of 2 ms & each task will occur once in a hyper period of 20 ms)

U = (2 + 2 +2+2+2) / (hyper-period = 20) = 10/20 =50%
